

## How to Condition Score

Score 1

The vertical and horizontal processes are prominent and sharp. The fingers can be pushed easily below the transverse and each process can be felt. The loin is thin with no fat cover.

Score 2

The vertical processes are prominent but smooth; individual processes being felt only as corrugations. The horizontal processes are smooth and rounded, but it is still possible to press fingers under. The loin muscle is a moderate depth but with little fat cover.

Score 3

The vertical processes are smooth and rounded; the bone is only felt with pressure. The horizontal processes are also smooth and well covered; hard pressure is required with the fingers to find the ends. The loin muscle is full and with a moderate fat cover.

Score 4

The vertical processes are only detectable as a line. The ends of the horizontal processes cannot be felt. The loin muscles are full and rounded, and have a thick covering of fat.

Score 5

The vertical and transverse processes cannot be detected even with pressure; there is a dimple in the fat layers where the processes should be. The loin muscles are very full and covered with very thick fat.

TARGETS	Weaning	Tupping	Lambing
Lowland	2.5	3.5	3.0
Upland	2.0	3.0	2.5
Hill	2.0	2.5	2.0

- Flushing has most effect on ewes in BCS 2.0 to 3.5
- Nutrition should be level for 3wks after tups removed
- BCS should be monitored during pregnancy
- Check BCS 8wks post-lambing & consider early weaning if ewes are thin
